DETAILED ACTION

Remarks

1. This application is in condition for allowance except for the withdrawn claims as noted below.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Election/Restrictions

2. Applicant's election with traverse of Group I in the reply filed on March 8, 2007 is acknowledged. The traversal is on the ground(s) that claim 1 requires the co-continuous structure. This is not found persuasive because the co-continuous structure is one of two options recited in claim 1, the other option being a "blend polymer in which the carbon fillers are at a higher concentration forms a continuously conductive matrix in which at least one further blend polymer is intercalated." Thus, as the co-continuous structure is only optionally recited, claim 1 does not require this feature.

The requirement is still deemed proper and is therefore made FINAL.

Priority

3. Receipt is acknowledged of application DE 10243592.8. However, a claim for priority under 35 U.S.C. 119(a)-(d) cannot be based on said application, since the United States application was filed more than twelve months thereafter (September 19, 2003 being a Friday, non-holiday).

Oath/Declaration

4. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because it claims foreign priority to application DE 10243592.8. However, as noted above, it is believed that priority is not properly claimed to this application. Submission of a new declaration with the correct information is required.

Allowable Subject Matter

5. Claims 1-9 are allowed.
6. The following is a statement of reasons for the indication of allowable subject matter:

Art Unit: 1745

The WO '299 reference does not teach or fairly suggest a plate comprising a plastic structure having a surface zone including gas-transport channels, as now claimed.
